REPORT OF BONE MARROW ASPIRATION / TREPHINE BIOPSY

Name: V K Gurg **Age / Sex:** 68 Yr/M **CR No:** 201405136462 **B.M.No:** A-1144/26
Cl.I /c: **Ward:** Clinical Hematology & Medical Oncology- Hematology Clinic **Dated:** 24/04/2026

Clinical Diagnosis:- Known case of Multiple Myeloma (Diagnosed in 2022), on therapy (VRd, followed by KRd, now on Daratumumab-pomalidomide maintenance). On follow-up, light-chain levels gradually increased. Bone marrow examination for residual disease assessment.

HEMOGRAM DETAILS

Hemogram No: H-131

HB:- 12.2 **gm/dl** **Retic:** 1.32 (c) % **PLT:** 171 **X10⁹/L** **TLC:** 6 **X10⁹/L**
DLC P- 44 **L-** 26 **M-** 30 **E-** - **Ba-** - **BI-** - **Pm--** **My-** - **Mm--** **nRBC-** -

PBF: Mild anisocytosis. Normocytic normochromic with microcytes. Platelets are adequate. No rouleaux formation or circulating plasma cells seen.

BONE MARROW FINDINGS

Particles: Particulate **NE:E Ratio** 3.2:1 **M:E Ratio** 2.4:1
Cellularity: - Mildly hypercellular
Blasts: 2 **Erythropoiesis:**
Promyelocytes: 1 Normoblastic
Myelocytes: 29 to mild megaloblastic
Metamyelocytes: 5 **Thrombopoiesis:**
Polymorphs: 17 Adequate
Lymphocytes: 14 with normoblastic
Monocytes; 2 **Others:**
Eosinophils: 2 Erythroid precursors - 24%, Eo-Baso precursors - 2%.
Basophils: - Right imprint shows 3% plasma cells.
Plasma Cells: 2 Left imprint shows 1% plasma cells.

CYTOCHEMISTRY

LAP - **MPO** - **PAS** - **PERLS** 2+

TREPHINE BIOPSY REPORT

Trephine Biopsy No : Tx-914/26

Bilateral trephine biopsies measuring 1.2 cm and 2 cm shows soft tissue and washed off marrow spaces. The preserved marrow spaces show an overall cellularity of 30-40%. Trilineage hematopoietic elements are adequately represented. No interstitial increase in plasma cells.

Reticulin - -

Interpretation **Known case of Multiple Myeloma, on therapy: Bone marrow shows 2% plasma cells.**

Advice Kindly collect flow cytometry MRD report which will be available online.

Department of Hematology

Flow cytometric assay for minimal residual disease (MRD)

Name V K Gurg Age/sex 68 Yr/M CR No. 201405136462
Ward/OPD Clinical Hematology & Medical Oncology-Hematology Clinic

Requisition Date	Lab ID	Sample	Consultant	BMA No.
25/04/2026	MRD-486/26	Bone Marrow Aspirate	-	A-1144/26

TLC ($\times 10^9$ /L)	Neutrophils (%)	Lymphocytes (%)	Monocytes (%)	Eosinophils (%)	Other (%)
6	-	-	-	-	-

Bone Marrow Diagnosis

K/C/O Multiple myeloma, on therapy.

Gated events

CD319 vs CD138 vs CD45 vs Low SSC 0.2% of all viable events.

RESULT

Percentage of MRD (%) 0.0017%

Number of events acquired 2.9 million

Cellularity of the sample Adequate

Viability of the sample (%) 92.2%

Comments

Positive for residual myeloma cells. The myeloma cells are positive for CD38, CD56, CD117, CD81 (dim), CD19 (dim), cytoKappa, negative for CD38, CD27, CD45, cytolambda

Advice

Clinical correlation.
